## Grignard Reagents

While GFS' focus is on specialty grignards that stem from our existing product line, GFS has plant capacity to support grignards from lab scale through container loads. Beyond what you see here, GFS continues to extend its offering to new halogenated compound inquiries that arise from work with our customers. Our unique offerings of alkynyl (ie. ethynyl MgCl), olefinic (ie. isopropenyl MgBr), and alkyl (ie. t-butyl MgCl) grignards are supported in several solvents, including but not limited to THF, butyl ether, methyl THF, and diethyl ether. Our ability to manufacture these internally help our customers save reactor space and time in their own facilities.
